Are you an artist interested in experimenting with conductive or thermochromic screenprinting inks?

We are researchers at Arizona State University, examining screenprinting as a new material for tangible interaction. We are designing conductive, magnetic, and thermochromic inks and screenprinting methods and want your feedback!

We are organizing a workshop on **Wednesday, December 9, 2.30pm-5pm** as part of a research study to get your feedback on these materials and see how you might use them in your practice. The workshop will cover an overview of our inks and methods. You will then be invited to experiment with basic designs and create a few prints. The workshop will conclude with a discussion and brainstorming around future uses of these materials.

The workshops will last for up to 3 hours and you will be compensated **$15/hr** for each hour of your time. You must be familiar with basic screenprinting and be 18 years or older to participate.

The workshops will be audio-recorded and photographed, and all data will be anonymized. If you are interested in participating, please contact Stacey Kuznetsov (kstace@asu.edu) to determine eligibility.
